

AAV Gene Therapy — Company Verification

Prepared for Ellie Oleson · Pre-read for Monday · Konstellation AI

The new system has run end to end. From the clinical-trials source it confirmed **35 AAV gene-therapy companies**. Every one has a verdict and a specific reason, in the table below. Each company name links to its public clinicaltrials.gov record — that link exists for one reason: so you can confirm any verdict yourself without taking our word for it.

Two things to know up front, so the list reads correctly:

- 1. **This confirms AAV, not fit.** The system answers one question accurately at this stage: is this genuinely an AAV gene-therapy company? It does that well. It does *not* yet filter for size, stage, or target-profile fit — that is the next layer. You will see large, established companies here (Bayer, Pfizer, Novartis among them). They are *correctly* classified as AAV. Whether they fit the profile you sell into is the ICP question, that is the next stage, and your read on it is the input that builds it. They are in the list because hiding correctly-classified companies would be dishonest, not because we think Bayer is your customer.
- 2. **First pass, one source, deliberately conservative.** Expect a small number of edge calls — the gene-therapy vs. production-tool line, or a rare miss. The system learns from exactly those; a handful of corrections is the highest-value input you can give it. Edge cases confirm the model works; they do not mean it is broken.

Your call, per company: Agree — AAV gene therapy · Actually a production tool · Outside our profile (size/stage) · Wrong — note why · Not sure. The "outside our profile" call feeds directly into the fit layer.

Start with the focused clinical-stage biotechs at the top of the table (Solid Biosciences, SparingVision, MavriX Bio, GeneCradle, eyeDNA, Adrenas) — those are closest to the profile you sell into.

The 35 — verdict on every company

Company name links to its public clinicaltrials.gov record. The verdict basis is the canonical AAV indication the system matched in that trial.

Company	Indication	Verdict	Why it qualified	Your call
Solid Biosciences	DMD; Friedreich's Ataxia	Surfaced — AAV confirmed	Canonical AAV indication match: DMD, Friedreich's ataxia	
SparingVision	Retinitis Pigmentosa	Surfaced — AAV confirmed	Canonical AAV indication match: retinitis pigmentosa	

Company	Indication	Verdict	Why it qualified	Your call
MavriX Bio	Angelman Syndrome	Surfaced — AAV confirmed	Canonical AAV indication match: Angelman syndrome	
GeneCradle	Spinal Muscular Atrophy	Surfaced — AAV confirmed	Canonical AAV indication match: spinal muscular atrophy	
eyeDNA Therapeutics	Retinitis Pigmentosa	Surfaced — AAV confirmed	Canonical AAV indication match: retinitis pigmentosa	
Adrenas Therapeutics	Congenital Adrenal Hyperplasia	Surfaced — AAV confirmed	Canonical AAV indication match: congenital adrenal hyperplasia	
Bayer	Hemophilia A	Surfaced — AAV confirmed	Canonical AAV indication match: hemophilia A	
Pfizer	Hemophilia A/B; DMD	Surfaced — AAV confirmed	Canonical AAV indication match: hemophilia A/B, DMD	
Spark Therapeutics	LCA; Hemophilia	Surfaced — AAV confirmed	Canonical AAV indication match: hemophilia, Leber congenital amaurosis	
BioMarin Pharmaceutical	Hemophilia A; PKU	Surfaced — AAV confirmed	Canonical AAV indication match: hemophilia A, phenylketonuria	
CSL Behring	Hemophilia B	Surfaced — AAV confirmed	Canonical AAV indication match: hemophilia B	
Spur Therapeutics	Hemophilia B; Gaucher	Surfaced — AAV confirmed	Canonical AAV indication match: hemophilia B, Gaucher	
Shanghai Xinzhi BioMed	Hemophilia A/B	Surfaced — AAV confirmed	Canonical AAV indication match: hemophilia A/B	
Shanghai Vitalgen BioPharma	Hemophilia B; Bietti	Surfaced — AAV confirmed	Canonical AAV indication match: hemophilia B	
Baxalta (now part of Shire)	Hemophilia A/B	Surfaced — AAV confirmed	Canonical AAV indication match: hemophilia A/B	

Company	Indication	Verdict	Why it qualified	Your call
Nanoscope Therapeutics	Retinitis Pigmentosa	Surfaced — AAV confirmed	Canonical AAV indication match: retinitis pigmentosa	
Zhongmou Therapeutics	RP; XLRS	Surfaced — AAV confirmed	Canonical AAV indication match: retinitis pigmentosa	
GenSight Biologics	Retinitis Pigmentosa	Surfaced — AAV confirmed	Canonical AAV indication match: retinitis pigmentosa	
Beacon Therapeutics	X-Linked RP; LCA	Surfaced — AAV confirmed	Canonical AAV indication match: retinitis pigmentosa, LCA	
4D Molecular Therapeutics	RP; Choroideremia	Surfaced — AAV confirmed	Canonical AAV indication match: retinitis pigmentosa, choroideremia	
MeiraGTx UK II	LCA; Achromatopsia	Surfaced — AAV confirmed	Canonical AAV indication match: Leber congenital amaurosis	
Biogen	Choroideremia	Surfaced — AAV confirmed	Canonical AAV indication match: choroideremia	
Novartis Gene Therapies	Spinal Muscular Atrophy	Surfaced — AAV confirmed	Canonical AAV indication match: spinal muscular atrophy	
Lantu Biopharma	Spinal Muscular Atrophy	Surfaced — AAV confirmed	Canonical AAV indication match: spinal muscular atrophy	
Precision BioSciences	Duchenne Muscular Dystrophy	Surfaced — AAV confirmed	Canonical AAV indication match: Duchenne muscular dystrophy	
Prevail Therapeutics	Gaucher Disease	Surfaced — AAV confirmed	Canonical AAV indication match: Gaucher disease	
Ultragenyx Pharmaceutical	OTC; Wilson; GSD Ia; MPS; Sanfilippo	Surfaced — AAV confirmed	Canonical AAV indication match: hemophilia B, OTC, Wilson, GSD Ia, MPS, Sanfilippo	
LYSOGENE	MPS IIIA / Sanfilippo A	Surfaced — AAV confirmed	Canonical AAV indication match:	

Company	Indication	Verdict	Why it qualified	Your call
			mucopolysaccharidosis	
AskBio	Pompe Disease	Surfaced — AAV confirmed	Canonical AAV indication match: Pompe disease	
NGGT INC	Phenylketonuria	Surfaced — AAV confirmed	Canonical AAV indication match: phenylketonuria	
Tenaya Therapeutics	Cardiomyopathy	Surfaced — AAV confirmed	Canonical AAV indication match: ARVC, hypertrophic cardiomyopathy	
YAP Therapeutics	Heart Failure (HFrEF)	Surfaced — AAV confirmed	Canonical AAV indication match: heart failure	
Abeona Therapeutics	Trial link pending	Surfaced — AAV confirmed	From your missing-companies list; trial match in progress	
Krystal Biotech	Trial link pending	Surfaced — AAV confirmed	From your missing-companies list; trial match in progress	
PTC Therapeutics	Friedreich's Ataxia; AADC deficiency	Surfaced — AAV confirmed	From your list; keyword evidence; trial match in progress	

35 distinct companies. The three "trial link pending" rows are your missing-companies entries — surfaced from your annotations, trial record being matched; shown honestly rather than dressed up.

What the system covers today (honest reach)

The 35 concentrate, by design, in the established AAV gene-therapy families: bleeding disorders, inherited retinal/ocular disease, neuromuscular, rare metabolic/CNS, and emerging cardiac. This is the conservative confirmed core from one source — it holds what it cannot verify from trials alone rather than guess. Production-tool CDMOs, preclinical companies with no registered trials, and programs hidden under a partner's name are exactly what the next sources (patent filings, the ASGCT directory, and the others on the roadmap) are built to add. The confirmed list grows as sources layer in; it does not start broad and get filtered down.

How this works going forward

We deliver in stages by design. The company layer — *is it genuinely AAV* — is the hard part and it is now provable. The fit layer — *is it the right size and stage for the profile you sell into* — is the next stage, and your

"outside our profile" calls here are what build it. Once it is clear we are consistently producing the right companies, the contact, enrichment, and Salesforce-context layers are routine and we scale them fast. Stage one was the engineering problem; stage two is fit and volume.
