To: Nick Lipetzky <nick@konstellationai.com>

Nick,

Good update. I'm on vacation until the 15th but will still do email. The modular engine architecture is the right call — especially separating Canon from the production engines. That's the part nobody else gets right.

I have a concrete proposal.

I just took on medical devices and robotics at SIM IP (Nasdaq: SMIP). Erich Spangenberg's IP monetization platform. We acquire patent portfolios from medtech companies and license them against \$1B+ in infringed product revenue. My job is to source the portfolios.

I have three active marketing workflows that need to run at scale:

1. Attorney referral nurture — three tiers of IP litigation and prosecution attorneys, monthly value-add emails, quarterly virtual roundtables, stale-contact recovery. These are the people who know where dormant patent portfolios sit.
2. In-house counsel outbound — targeting VP/Head of IP and General Counsel at medical device and robotics companies (\$100M–\$2B revenue, 200–2,000 patents, no active licensing program). Multi-touch sequences. The sales cycle is 6–12 months.
3. Founder-led content — daily LinkedIn/Substack publishing that feeds both pipelines. Different register than Darrow. This is IP financialization, not translational science.

All three workflows are fully documented. Sequences written. Tier logic defined. Cadences set. What I don't have is the operational layer to run them without a full-time marketing associate.

That's your RevOps engine.

The Canon engine governs brand voice, target criteria, and the \$1B acquisition thesis filter. The Creative engine generates the outreach sequences and content within brand guidelines. RevOps orchestrates the cadences and pipeline.

I want Konstellation to power SIM IP's medtech marketing operation. Not as a client — as a partnership. You get a public-company use case with a named vertical (medical devices, robotics, IP monetization) and a reference customer who can speak to owner-operators in your language. I get the operational infrastructure without hiring a team.

I think we should also have Konstellation bill \$25K per month to Darrow. We can pull the cash back via stock sale and generate tax credits and give you a salary for the rest of the year.

Let's scope this when I'm back. I land May 15.

Will

Best,
Will Rosellini
